

Azim Mohamed

Dubai, UAE | b00099970@aus.edu

PROFILE

Computer Science undergraduate at the American University of Sharjah with hands-on experience in machine learning, computer vision, and enterprise systems. Built an end-to-end UAE license plate recognition pipeline evaluated on 9,610 images and predictive regression models using Python, PyTorch, OpenCV, and scikit-learn.

EDUCATION

American University of Sharjah
Bachelor of Science in Computer Science
Relevant Coursework: Computer Vision, Artificial Intelligence, Web App Development, Data Structures and Algorithms
Delhi Private School Sharjah
High School Diploma | 2022

August 2023 - Present

PROFESSIONAL EXPERIENCE

ERP Developer Intern - Technomak Industries
• Supported implementation and maintenance of Microsoft Dynamics ERP workflows across multiple departments, troubleshooting end-user issues and assisting with bug fixes.
• Collaborated with project managers and engineers to translate departmental requirements into ERP workflow improvements and support solutions.
• Conducted end-user training and provided ongoing technical support for Microsoft Dynamics workflows.

December 2024 - January 2025

PROJECTS

UAE License Plate Detection and Recognition
Python | PyTorch | OpenCV | RF-DETR | RT-DETR | Keras
• Designed and implemented an end-to-end computer vision pipeline for UAE license plate detection, OCR-based text recognition, and seven-emirate classification.
• Evaluated the detection pipeline on a 9,610-image dataset; RF-DETR achieved 86.64% mAP@0.50:0.95, OCR reached 97.94% full-plate exact-match accuracy, and emirate classification reached 99.59% accuracy.
• Built dataset-cleaning and validation workflows, maintained frozen train/validation/test splits, and compared RF-DETR with RT-DETR-L using controlled evaluation and augmentation experiments.

Vehicle Price Regression Analysis
Python | pandas | NumPy | scikit-learn | Matplotlib
• Built and compared Simple Linear Regression, Multiple Linear Regression, and Random Forest Regression models to predict vehicle prices from vehicle characteristics.
• Preprocessed and analyzed data using pandas and NumPy, then trained and evaluated predictive models with scikit-learn.
• Implemented an input-driven prediction workflow and visualized feature relationships and model outputs with Matplotlib to compare regression behavior.

TECHNICAL SKILLS

Programming: Python, C++, Java, JavaScript, R, SQL
Machine Learning & Data: PyTorch, Keras, scikit-learn, OpenCV, pandas, NumPy, Matplotlib
Web: HTML, CSS
Enterprise & Analytics: Microsoft Dynamics, Power BI
Tools: GitHub
